COLORED-PET FILM

Our colored films are made using mass-coloration technology — the pigment is infused into the PET polymer before extrusion, so the color is part of the material itself. This ensures excellent fade resistance and durability, unlike surface-coated films where the color layer sits only on top and can wear off over time.Our colored films are made using mass-coloration technology — the pigment is infused into the PET polymer before extrusion, so the color is part of the material itself. This ensures excellent fade resistance and durability, unlike surface-coated films where the color layer sits only on top and can wear off over time.

Cost-Effective	Affordable and practical, ideal for entry-level car owners
Easy Installation	Strong adhesion and compatibility with most vehicle window curvatures
Good Privacy Protection	Provides excellent privacy despite its basic functionality
